

Information June/July 2017

Change to PPS® - Champion 4.0 to 01.09.2017

Dear Sir or Madam,

At the beginning of the year, we first pointed out the planned technical optimization of our profile system **PPS®-Champion**. We are pleased to announce that the conversion will take place on **01.09.2017**.

As of this date, we will only deliver our recognized profile system **PPS®-Champion** with the unique new base profile (Generation **4.0**). For you as a customer the process will not change since the computer number, the EAN code and the price remain the same. In contrast to the previous basic profile, you and your customers get the following additional benefits through the new basic profile:

- Three adjustment grooves and a nominal bending point in the base
- The 40 mm width base profile allows a laterally offset bore from the screed joint and/or a larger adhesive application area
- With the transition profile it is possible to automatically install hard floor coverings of equal height or with different heights of up to 5 mm
- By means of simple mechanical adjustments, even height differences of up to 8 mm can be compensated with the transition profile
- profile allow an application range from 6.5 up to an optional 18 mm

Despite product optimization and more materials, we will not increase prices, nor will we accept the return of "old base profiles".

In order to distinguish **PPS®-Champion 4.0** from the previous version and to adapt your stock successively, the profile packs and the cartons are marked with a label (see below).

The label also contains a QR code, which can be used to call up a laying video.

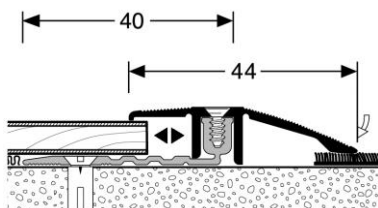

.../2

For the mechanical adjustments for height compensation, we optionally offer a laying aid as a new accessory. The lasered laying tool PPS 4.0 has a suggested end consumer price of 6.95 EUR per piece. The **Küberit** order number is 1 46 80 00 9.

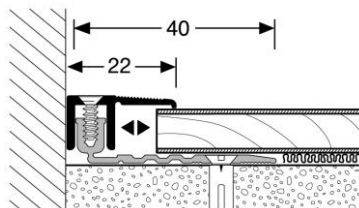

Please contact us if you have any questions or need brochures and samples of the innovative **PPS®-Champion 4.0**. We are glad to support you.

Greetings from South Westphalia
